

Name the cell and explain how it is adapted

Which DNA base codes with which?

Label the cells

A	T
C	
T	
A	
T	
G	

Found in plant cells only

plant cell

animal cell

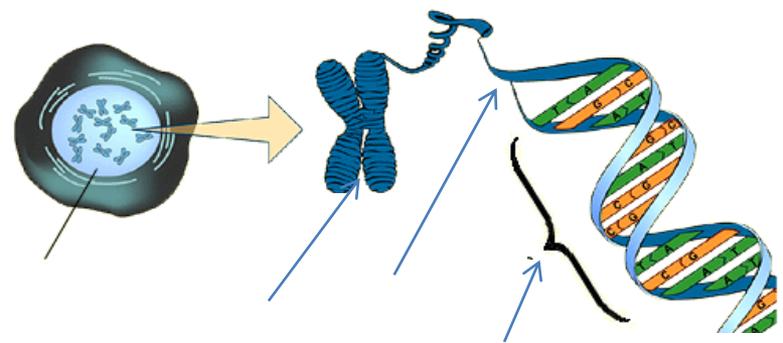

Dominant alleles are shown by CAPITAL/lower case letters.

If a characteristic is dominant it will/will not be shown is an allele is present. Eg BB- Blue eyes Bb I blue eyes

Recessive alleles are shown by CAPITAL/lower case letters.

If a characteristic is recessive it will/will not be shown unless both recessive alleles are present eg. bb- brown eyes.

Draw a plant and label where the following parts are :roots, root hair cells, leaves, phloem and xylem, stomata

Put these labels in the right places:

Gene, Chromosome, Nucleus, DNA

Inside each normal human cell there is a _____ this contains genetic information in 23 pairs of _____s. Chromosomes are made of a chemical called _____, A section of DNA that codes for a certain characteristic is called a _____.

Transpiration is when water is _____ from the plant. Water enters the plant through the _____ and leaves the plant from the _____.

Match up the parts to the functions

- Mitochondria
- Cell wall
- Cell membrane
- Chloroplast
- Nucleus
- Cytoplasm
- Vacuole

Function	Animal	Plant
Contains genes and controls cell	Yes	Yes
Where respiration happens		
Gives cell structural support		
Lets substances in and out of cell		
Where chemical reactions happen		
Where photosynthesis happens		

Put these in size order
Organ, cell, tissue, organ system

Add to the spider diagrams to explain what happens when your body is:

Too hot

Too cold

Hormones are used to send messages around the body they are _____ that are released by _____ in the body. They travel in the _____.

The pancreas releases 2 hormones that control blood _____ level.

_____ is used to reduce the level of glucose in the blood.

_____ increases the amount of glucose in the blood.

Key words

Blood chemical glucose glucagon insulin glands

Fill in the boxes on the diagram with the words below:

Receptor Spinal cord Motor neurone

Sensory neurone Relay neurone

What is the name for the gap between neurones ?

How do messages cross this gap?
